

Delivery Hero

Hybrid cloud data streaming architecture

Kateryna Khotkevych

Software Engineer

Prerequisites

Key Facts about Delivery Hero

Founded in May 2011

Operating in 40+ markets with c 17.000 employees

The largest food network in the world with app.
200.000+ restaurant partners

Delivered a great market debut with our IPO on 30th
June 2017

Global leader in the space with 1 million orders received
per day (Q1 2018)

2 million orders delivered in one day (July 2019)

Delivery Hero

Data Volume in Numbers

- + **User clicks**
- + **Logistics data**
- + **Restaurant availability**
- + **Menu items**
- + **Customer data**

Delivery Hero

Delivery Hero

Mission

- **Unify the data structure across all entities**
- **Provide different data consumptions types:**
 - **Near real-time**
 - **Low-latency**
 - **High-latency (analytics)**
- **Become a data producer for ML applications**

Architecture

Architecture

Ingestion API

Delivery Hero

**How to validate
input from
various data
producers?**

Ingestion API

- **Single endpoint**
- **Batch import**
- **AWS Lambda for event processing**
- **IP Whitelisting**
- **JWT authentication**
- **Data quality dashboards**

AWS API Gateway

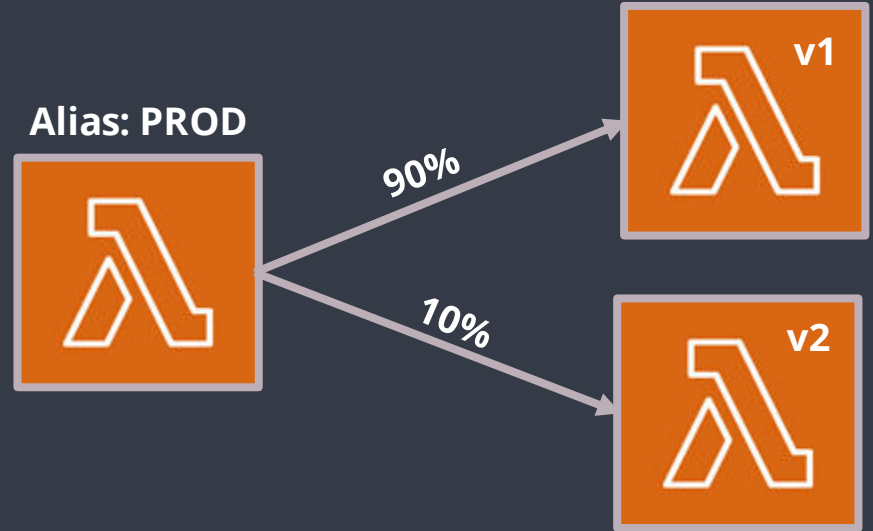

AWS Lambda

Canary Deployment

Canary Deployment

- Custom solution
- 2 versions under the same alias
- Metrics monitoring

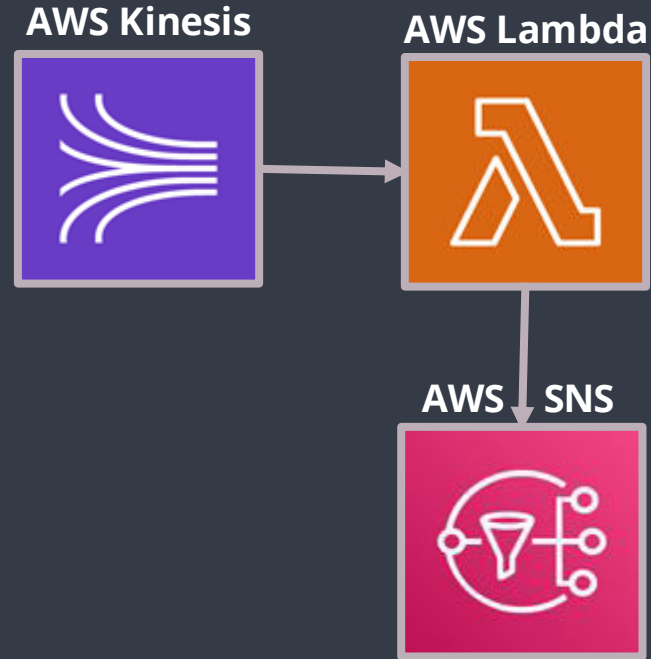

Streaming

Streaming

- **Kinesis stream preserves messages up to 7 days**
- **Ability to replay data**

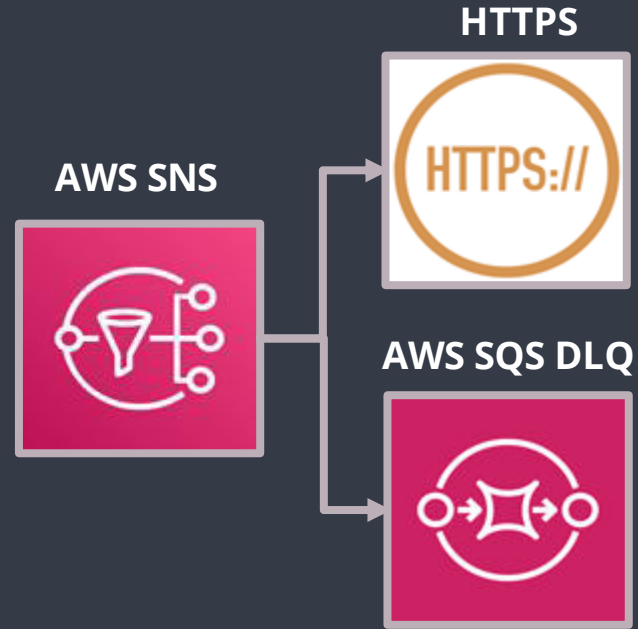

**Near real-
time
streaming
(1,2 ms)**

Near real-time streaming

- 2 types for subscriptions
- Aggregations
- Filtering based on event attributes

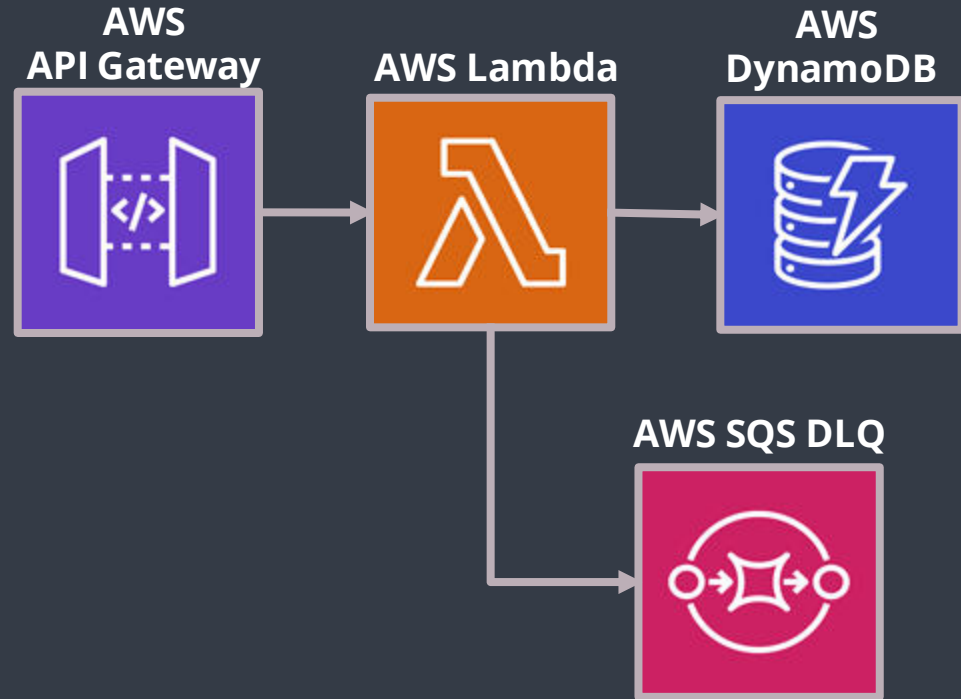

Low-latency API

Low-latency API

- Dead Letter Queue
- On-demand scaling
- Retains PII data for 30 days

Analytics

Delivery Hero

AWS S3?
AWS Redshift?
GCP BigQuery?

AWS to GCP transfer

**Google
Pub/Sub**

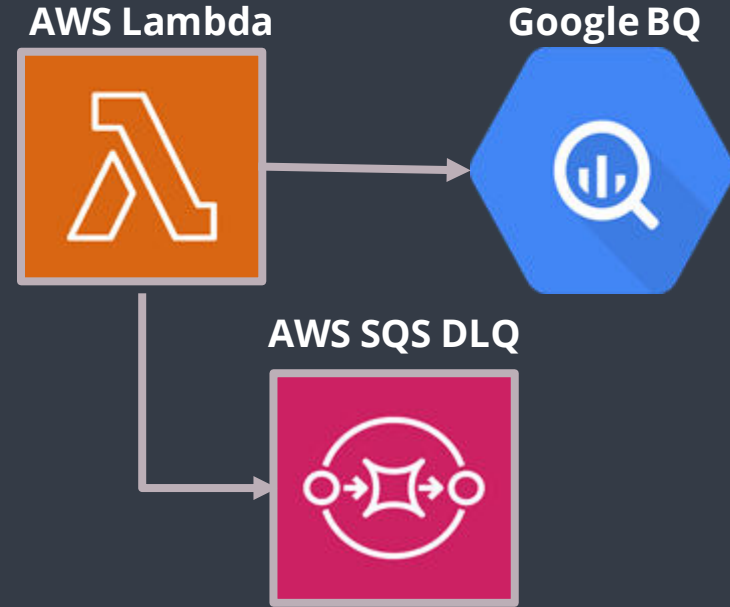

**Google
Dataflow**

Monthly Expenses

Analytics

- **GDPR compliance**
- **Data quality visualization**
- **Restricted data access**

Any Producer

Ingestion API			
Streaming			
First use case: Near real-time	Second use case: Low-latency API		Third use case: Analytics
 	  		  

Any Consumer

Tech Stack

	Collaboration	Monitoring & Logging
Backend	 	      
Data Management	 Amazon DynamoDB  Amazon S3  amazon SQS	 Google Cloud Pub/Sub  Google BigQuery  amazon KINESIS  amazon SNS  Amazon Lambda  Apache Atlas
Infra	 Amazon API Gateway  aws	 Google Cloud Platform  HashiCorp Terraform

Data Catalog

Delivery Hero

How to pick Data Catalog?

Data Catalog

- Lineage
- Relations between data models
- Can work with various data sources

AWS Lambda

Apache Atlas
